SUMMARY

Machine learning researcher with 8+ years of experience in autonomous vehicle systems, deep learning, and safety-critical control algorithms. Proven expertise in reinforcement learning, Bayesian neural networks, and LLM integration for intelligent systems. Skilled at applying advance scalable ML techniques in a diverse range of real-world problems. Full-stack developer with 5 years of industry experience in agile development, microservices, and responsive designs.

SKILLS AND CERTIFICATES

Machine Learning: Supervised/unsupervised learning, reinforcement learning, deep learning, statistical analysis, LLM fine-tuning, RAG, prompt engineering. **Programming:** Python (PyTorch, TensorFlow, Scikit-Learn, Keras, NumPy, Pandas), C++, SQL, React, Django, Transformers. **Data Systems:** Spark, Hadoop, ETL pipelines, large-scale data processing. **Tools & Platforms:** AWS, CI/CD pipelines, MySQL, Embedded Systems. **Certificates:** Generative AI with Large Language Models, Introduction to Gen-AI, Gen-AI with Large Language Models, Build a Backend REST API with Python & Django, Python Django - The Full Stack Guide. **Soft Skills:** Research, cross-functional collaboration, leadership.

EDUCATION

Illinois Institute of Technology — Chicago, IL
Ph.D. in Mechanical and Aerospace Engineering — (Expected) Aug 2025

University of Notre Dame — Notre Dame, IN
M.S. in Electrical Engineering — Advisor: Panos Antsaklis

EXPERIENCE

Illinois Institute of Technology — Chicago, IL
Graduate Research Assistant — Ongoing
- Developed a deep learning framework achieving 35% improved uncertainty quantification for autonomous vehicles.
- Built multi-agent reinforcement learning framework that improves traffic flow by 40% and reduces congestion time by 30%.

University of Notre Dame — Notre Dame, IN
Graduate Research Assistant — 2016-2019
- Designed data driven resilient controller achieving 95% attack detection accuracy using unsupervised machine learning.
- Developed polynomial approximation framework reducing computational complexity by 50% while maintaining performance.

EmNet LLC. — South Bend, IN
Machine Learning Research Intern — 2016
- Created deep learning architecture improving sewer water management prediction accuracy by 40% across 4 major US cities.
- Implemented neural network control mechanism in C for EPA-SWMM, deployed in production systems across multiple cities.

Tachara Online Bookstore — Tehran, Iran
Technical Project Lead — 2010-2013
- Designed an e-commerce big data processing platform using .NET MVC 4, C# and SQL Server serving over 1M active users.
- Integrated payment gateways and inventory systems reducing transaction processing time by 60%.

Azar Negar Shargh Co. — Shiraz, Iran
Principal Engineer — 2004-2009
- Architected and developed responsive, full-stack content management systems for high-profile corporate communications.
- Led cross-functional engineering teams implementing agile methodologies enabling same-day feature deployment.

SELECTED PROJECTS

Distributed Filter Design Agent | *Vision Transformers, YOLO, ResNet, ADS, HFSS* — Winter 2024
- Trained multi-modal Vision Transformer with YOLO and ResNet on filter topologies with 92% accuracy.
- Developed end-to-end AI agent for synthesizing novel filters from desired characteristics, reducing iteration time by 85%.

RF Signal Classification Assistant | *PyTorch, Transformers, Signal Processing* — Spring 2024
- Developed multimodal LLM combined with spectral analysis to classify and identify 95% of unknown RF signals.
- Built conversational interface to query signal characteristics using natural language, reducing analysis time by 50%.

Signal Integrity Design Copilot | *LangChain, GPT-4, PCB Analysis Tools* — Spring 2024
- Built LLM-powered assistant for PCB signal integrity analysis, provide design recommendations with 88% accuracy.
- Integrated with Altium Designer and ADS to automate EMI and matching analysis, reducing design iteration time by 45%.

Autonomous Vehicles Control with RL | *CARLA simulator, Stable Baselines, PyTorch, OpenCV* — Spring 2023
- Trained a reinforcement learning agent using CARLA simulator images to autonomously control vehicle navigation.
- Developed a vision-based controller that learned driving in a realistic urban environment without explicit programming.

Vehicle Dynamics Model: Uncertainty Quantification | pyChrono, scikit, PyTorch, torchbnn — Winter 2022
- Validated first-principles vehicle dynamics models against Chrono::Vehicle simulations and quantified modeling uncertainty.

- Characterized modeling uncertainties using Gaussian Process Regression and Bayseian neural with 80% improvement.

LEADERSHIP AND SERVICES

- Member of search committee for Graduate Career Director position, reviewed and interviewed 6 candidates. University of Notre Dame — January 2018
- Professional Development Chair, Graduate Student Union, University of Notre Dame — 2017 - 2018
- Member of University Committee on Internationalization, appointed by the President, University of Notre Dame. — 2017 - 2018
- Jury and Test Designer for Iran's National Skills Olympiad on IT Software Solutions for Business — 2013
