SUMMARY

Machine learning researcher with 8+ years of experience in autonomous vehicle systems, deep learning, and safety-critical control algorithms. Proven expertise in reinforcement learning, Bayesian neural networks, and LLM integration for intelligent systems. Skilled at applying advance scalable ML techniques in a diverse range of real-world problems. Full-stack developer with 5 years of industry experience in agile development, microservices, and responsive designs.

EDUCATION

Illinois Institute of Technology	Chicago, IL
Ph.D. in Mechanical and Aerospace Engineering	(Expected) 2025
University of Notre Dame	Notre Dame, IN
M.S. in Electrical Engineering	Advisor: Panos Antsaklis

EXPERIENCE

Illinois Institute of Technology , <i>Graduate Research Assistant</i>	Chicago, IL, Ongoing
- Developed a deep learning framework achieving 35% improved uncertainty quantification for autonomous vehicles. - Built multi-agent reinforcement learning framework that improves traffic flow by 40% and reduces congestion time by 30%.	
University of Notre Dame , <i>Graduate Research Assistant</i>	Notre Dame, IN, 2016-2019
- Designed data driven resilient controller achieving 95% attack detection accuracy using unsupervised machine learning. - Developed polynomial approximation framework reducing computational complexity by 50% while maintaining performance.	
EmNet LLC. , <i>Machine Learning Research Intern</i>	South Bend, IN, 2016
- Created deep learning architecture improving sewer water management prediction accuracy by 40% across 4 major US cities. - Implemented neural network control mechanism in C for EPA-SWMM, deployed in production systems across multiple cities.	
Tachara Online Bookstore , <i>Technical Project Lead</i>	Tehran, Iran, 2010–2013
- Designed an e-commerce big data processing platform using .NET MVC 4, C# and SQL Server serving over 1M active users. - Integrated payment gateways and inventory systems reducing transaction processing time by 60%.	
Azar Negar Shargh Co. , <i>Principal Engineer</i>	Shiraz, Iran, 2004–2009
- Architected and developed responsive, full-stack content management systems for high-profile corporate communications. - Led cross-functional engineering teams implementing agile methodologies enabling same-day feature deployment.	

SELECTED PROJECTS

Traffic Congestion using Deep RL PyTorch, PPO, Multi-Head Attention, Actor-Critic Networks, GNN	Ongoing
- Attention-based PPO agent to optimize highway traffic flow through speed commands, achieving 25–40% congestion reduction - Designed using multi-head attention state to handle 10–100+ vehicles with lane-change and graph-based highway topology	
Autonomous Vehicles Control with RL <i>CARLA simulator, Stable Baselines, PyTorch, OpenCV</i>	Spring 2023
- Trained a reinforcement learning agent using CARLA simulator images to autonomously control vehicle navigation. - Developed a vision-based controller that learned driving in a realistic urban environment without explicit programming.	
Vehicle Dynamics Model: Uncertainty Quantification pyChrono, scikit, PyTorch, torchbnn	Winter 2022
- Validated first-principles vehicle dynamics models against Chrono::Vehicle simulations and quantified modeling uncertainty. - Characterized modeling uncertainties using Gaussian Process Regression and Bayseian neural with 80% improvement.	
Distributed Filter Design Agent <i>Vision Transformers, YOLO, ResNet, SFT, ADS, HFSS</i>	Winter 2024
- Trained multi-modal Vision Transformer with YOLO and ResNet on filter topologies with 92% accuracy after post-training. - Developed end-to-end AI agent for synthesizing novel filters from desired characteristics, reducing iteration time by 85%.	
RF Signal Classification Assistant <i>PyTorch, Transformers, Signal Processing</i>	Spring 2024
- Developed multimodal LLM combined with spectral analysis to classify and identify 95% of unknown RF signals. - Built conversational interface to query signal characteristics using natural language, reducing analysis time by 50%.	
Signal Integrity Design Copilot <i>LangChain, GPT-4, PCB Analysis Tools</i>	Spring 2024
- Built LLM-powered assistant for PCB signal integrity analysis, provide design recommendations with 88% accuracy. - Integrated with Altium Designer and ADS to automate EMI and matching analysis, reducing design iteration time by 45%.	

SKILLS AND CERTIFICATES

Machine Learning: Supervised/unsupervised learning, reinforcement learning, deep learning, statistical analysis, LLM fine-tuning, RAG, prompt engineering. **Programming:** Python (PyTorch, TensorFlow, Scikit-Learn, Keras, NumPy, Pandas), C++, SQL, React, Django, Transformers. **Data Systems:** Spark, Hadoop, ETL pipelines, large-scale data processing. **Tools & Platforms:** AWS, Azure, CI/CD pipelines, MySQL, Embedded Systems, Docker, kubernetes. **Certificates:** Designing Microsoft Azure Infrastructure Solutions (AZ-305), Implementing Analytics Solutions Using Microsoft Fabric (DP-600), Generative AI with Large Language Models, Introduction to Gen-AI, Gen-AI with Large Language Models, Build a Backend REST API with Python & Django, Python Django—The Full Stack Guide. **Soft Skills:** Research, cross-functional collaboration, leadership.

LEADERSHIP AND SERVICES

- Member of search committee for Graduate Career Director position, reviewed and interviewed 6 candidates. January 2018
University of Notre Dame
- Professional Development Chair, Graduate Student Union, University of Notre Dame 2017–2018
- Member of University Committee on Internationalization, appointed by the President, University of Notre Dame. 2017–2018
- Jury and Test Designer for Iran’s National Skills Olympiad on IT Software Solutions for Business 2013
